The Black Pistol
By: halomacmodder

Description:

The Black Pistol is my first skin and I am pretty proud of it. Basically, I made the pistol black (duh). Note: The skin is very shiny on good graphics cards.

Installation:

Open up a map in HMT and open up the "bitm" tag. Now scroll down to "weapons/fp/butmaps/pistol and click on "Inject Texture". Now browse over to the Black Pistol dds file and press ok. Now your ready to play with it!
